Redacted Azure VM Modernization Assessment

Keep every piece of evidence and uncertainty, from applicability to migration prerequisites.

Training scenario · Not an official quote | Assessment date 2027-02-01 | 1.0 · Verified 2026-10-12

> **Calculation basis:** This run-rate comparison holds source usage fixed and uses rates effective on the assessment date; it does not simulate actual bills across months. Only substantiated compute resource costs and explicitly listed storage are included. Licensing, networking, taxes, and other costs not entered are out of scope. Prices and quota/capacity data are not live. Every candidate requires performance validation and predeployment checks. The email's specific increases, commercial treatment, and details of lifted v4 restrictions have not been fully verified against public sources. These scenarios are not confirmed policy.

Parameters: User-facing CPU/network target 40%, memory target 60%; batch target 80%; minimum observation window 30 days, covering business peaks. Older-generation scenario 25%; use the versioned lists for the seven-region percentages and exact exclusions.

Analyze valid records

6

Total imported 6; not analyzed 0

Known instance count

12

Not the billing row count

Explicitly entered core count

116

Record coverage 6/6; unknown values are not treated as zero

Lifecycle deadline record

5

Check the exact series and cloud scope

Data quality and amount coverage

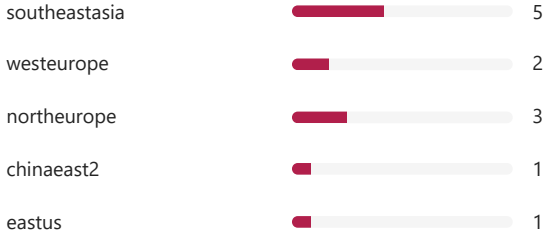

Input: Local import (file identifiers omitted). Import errors: 0; notices: 0. Unknown amounts are not counted as zero.

Cloud / Currency / Cost basis	Substantiated unadjusted compute cost	Amount coverage	Comparable conditional difference	Difference coverage
Commercial / USD / Amortized	USD 4145.83	4/5 records	USD 1130.11	2/5; first candidate only
China / USD / Amortized	Unknown	0/1 records	Unknown	0/1; first candidate only

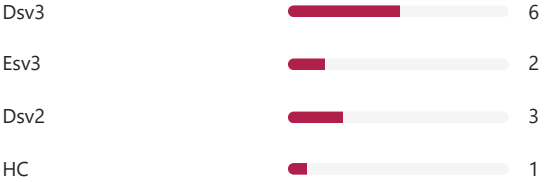

Each group is independent, with no automatic currency conversion. The substantiated subset does not represent the entire bill. Differences may be negative and are not realizable total-bill savings.

Wave 1 · Prioritize retirement deadlines and business risk

VM-001

`Standard_D8s_v3 · Commercial / southeastasia · 4 instances`

Source period: 2026-09-01 to 2026-10-01 (end date exclusive); 720 hours per instance × 4.

Performance evidence: source 8 vCPU / 32 GiB; CPU P95 18%, memory P99 24%, outbound network P95 160 Mbps; observation 30 days, peak coverage Confirmed; type user-facing.

Commercial evidence: MCA / PAYG; RI coverage Unknown%, expiration Not provided; EA enrollment renewal Not provided. Commitment discounts do not transfer automatically from source to target.

End of Life 2029-11-15 · Retirement has been publicly announced. Complete the transition by the applicable deadline; this does not mean immediate shutdown.

Rule REGIONAL-VM: Regional training scenario +8%; check the notice for applicable meters.
Storage rule STORAGE-INCLUDED: Storage training scenario +8%; only recognized products, not all storage.

Source baseline compute cost	Unadjusted compute cost	Associated storage scenario/effective cost	Price evidence
USD 1209.60	USD 1306.37	USD 259.20	demo; the original title is omitted. Refer to the source material.

Default first candidate / v5

Standard_D4s_v5

- 4 vCPU / 16 GiB； No temporary disk
- Projection constraints: CPU ≥ 3.60 cores, memory ≥ 12.80 GiB; no cross-generation CPU speedup is assumed.
- Remote disks: 8 / 6400 IOPS / 145 MB/s; network 12500 Mbps (limits, not guarantees).
- v5: Extended, a low-disruption transition path; resize may still require downtime/deallocation.

Compute cost: **USD 435.46**
Including provided remaining commitment cost: USD 435.46
Conditional difference: **USD 870.91**

A downsizing candidate screened through resource-headroom projection, not a safety guarantee.

Local price snapshot; original evidence title omitted.

Blocked / Validation needed

- Region/availability zone, quota, and capacity need verification
- Application performance baseline, backups, and rollback drills need validation

Official SKU specifications (internet required)

Alternative path / v6

Standard_D4s_v6

- 4 vCPU / 16 GiB； No temporary disk
- Projection constraints: CPU ≥ 3.60 cores, memory ≥ 12.80 GiB; no cross-generation CPU speedup is assumed.
- Remote disks: 12 / 6400 IOPS / 212 MB/s; network 12500 Mbps (limits, not guarantees).
- v6: Current; validate against the Gen2/NVMe/MANA modernization path.

Compute cost: **USD 497.66**
Including provided remaining commitment cost: USD 497.66
Conditional difference: **USD 808.71**

A downsizing candidate screened through resource-headroom projection, not a safety guarantee.

Local price snapshot; original evidence title omitted.

Blocked / Validation needed

- Region/availability zone, quota, and capacity need verification
- Application performance baseline, backups, and rollback drills need validation

Official SKU specifications (internet required)

Alternative path / v7

Standard_D4s_v7

- 4 vCPU / 16 GiB； No temporary disk
- Projection constraints: CPU ≥ 3.60 cores, memory ≥ 12.80 GiB; no cross-generation CPU speedup is assumed.
- Remote disks: 12 / 8000 IOPS / 230 MB/s; network 25000 Mbps (limits, not guarantees).
- v7: Current; validate against the Gen2/NVMe/MANA modernization path.

Compute cost: **USD 518.40**
Including provided remaining commitment cost: USD 518.40
Conditional difference: **USD 787.97**

A downsizing candidate screened through resource-headroom projection, not a safety guarantee.

Local price snapshot; original evidence title omitted.

Blocked / Validation needed

- Region/availability zone, quota, and capacity need verification
- Application performance baseline, backups, and rollback drills need validation

Official SKU specifications (internet required)

- Region/availability zone, subscription quota, and live capacity: verify before deployment.

Wave 1 · Prioritize retirement deadlines and business risk

VM-002

`Standard_E8s_v3 · Commercial / westeurope · 2 instances`

Source period: 2026-09-01 to 2026-10-01 (end date exclusive); 720 hours per instance × 2.

Performance evidence: source 8 vCPU / 64 GiB; CPU P95 42%, memory P99 73%, outbound network P95 400 Mbps; observation 30 days, peak coverage Confirmed; type user-facing.

Commercial evidence: MCA / RI; RI coverage 70%, expiration 2027-09-01; EA enrollment renewal Not provided. Commitment discounts do not transfer automatically from source to target.

End of Life 2029-11-15 · Retirement has been publicly announced. Complete the transition by the applicable deadline; this does not mean immediate shutdown.

Rule REGIONAL-VM: Regional training scenario +9%; check the notice for applicable meters.
Storage rule STORAGE-MISSING: No storage product/meter provided.

Source baseline compute cost	Unadjusted compute cost	Associated storage scenario/effective cost	Price evidence
USD 550.08	USD 571.46	Unknown / Evidence needed	demo; the original title is omitted. Refer to the source material.

Default first candidate / v5

`Standard_E16ds_v5`

- 16 vCPU / 128 GiB；600 GiB temporary disk
- Projection constraints: CPU ≥ 8.40 cores, memory ≥ 77.87 GiB; no cross-generation CPU speedup is assumed.
- Remote disks: 32 / 25600 IOPS / 600 MB/s; network 12500 Mbps (limits, not guarantees).
- v5: Extended, a low-disruption transition path; resize may still require downtime/deallocation.

Compute cost: **USD 1632.38**
Including provided remaining commitment cost: Unknown / Evidence needed
Conditional difference: **Unknown / Evidence needed**

Modernization candidates with no reduction in source CPU/memory capacity.

Local price snapshot; original evidence title omitted.

`Blocked / Validation needed`

- Region/availability zone, quota, and capacity need verification
- Application performance baseline, backups, and rollback drills need validation
- Remaining commitment cost is unknown; no realizable difference can be reported

Official SKU specifications (internet required)

- Region/availability zone, subscription quota, and live capacity: verify before deployment.
- Purchase commitments do not disappear automatically when configurations change. Verify cross-series RI applicability, reallocation of SP consumption, and remaining commitments separately.

Wave 1 · Prioritize retirement deadlines and business risk

VM-003

`Standard_DS3_v2 · Commercial / northeurope · 3 instances`

Source period: 2026-09-01 to 2026-10-01 (end date exclusive); 720 hours per instance × 3.

Performance evidence: source 4 vCPU / 14 GiB; CPU P95 35%, memory P99 46%, outbound network P95 180 Mbps; observation 30 days, peak coverage Confirmed; type user-facing.

Commercial evidence: EA / PAYG; RI coverage Unknown%, expiration Not provided; EA enrollment renewal 2028-01-01. Commitment discounts do not transfer automatically from source to target.

End of Life 2028-05-01 · Retirement has been publicly announced. Complete the transition by the applicable deadline; this does not mean immediate shutdown.

Rule LEGACY-BASE: Older-generation training scenario +25%; regional VM adjustment excluded, with no stacking.
Storage rule STORAGE-MISSING: No storage product/meter provided.

Source baseline compute cost	Unadjusted compute cost	Associated storage scenario/effective cost	Price evidence
USD 604.80	USD 648.00	Unknown / Evidence needed	demo; the original title is omitted. Refer to the source material.

Default first candidate / v7

Standard_D4s_v7

- 4 vCPU / 16 GiB； No temporary disk
- Projection constraints: CPU ≥ 3.50 cores, memory ≥ 10.73 GiB; no cross-generation CPU speedup is assumed.
- Remote disks: 12 / 8000 IOPS / 230 MB/s; network 25000 Mbps (limits, not guarantees).
- v7: Current; validate against the Gen2/NVMe/MANA modernization path.

Compute cost: **USD 388.80**
Including provided remaining commitment cost: USD 388.80
Conditional difference: **USD 259.20**

Modernization candidates with no reduction in source CPU/memory capacity.

Local price snapshot; original evidence title omitted.

Blocked / Validation needed

- Region/availability zone, quota, and capacity need verification
- Application performance baseline, backups, and rollback drills need validation

Official SKU specifications (internet required)

Alternative path / v5

Standard_D4s_v5

- 4 vCPU / 16 GiB； No temporary disk
- Projection constraints: CPU ≥ 3.50 cores, memory ≥ 10.73 GiB; no cross-generation CPU speedup is assumed.
- Remote disks: 8 / 6400 IOPS / 145 MB/s; network 12500 Mbps (limits, not guarantees).
- v5: Extended, a low-disruption transition path; resize may still require downtime/deallocation.

Compute cost: **Unknown / Evidence needed**
Including provided remaining commitment cost: Unknown / Evidence needed
Conditional difference: **Unknown / Evidence needed**

Modernization candidates with no reduction in source CPU/memory capacity.

Local price snapshot; original evidence title omitted.

Blocked / Validation needed

- Region/availability zone, quota, and capacity need verification
- Application performance baseline, backups, and rollback drills need validation
- Provide the target SKU's EA price cap/contract price separately; the source SKU's cap cannot be reused.

Official SKU specifications (internet required)

Alternative path / v6

Standard_D4s_v6

- 4 vCPU / 16 GiB； No temporary disk
- Projection constraints: CPU ≥ 3.50 cores, memory ≥ 10.73 GiB; no cross-generation CPU speedup is assumed.
- Remote disks: 12 / 6400 IOPS / 212 MB/s; network 12500 Mbps (limits, not guarantees).
- v6: Current; validate against the Gen2/NVMe/MANA modernization path.

Compute cost: **Unknown / Evidence needed**
Including provided remaining commitment cost: Unknown / Evidence needed
Conditional difference: **Unknown / Evidence needed**

Modernization candidates with no reduction in source CPU/memory capacity.

Local price snapshot; original evidence title omitted.

Blocked / Validation needed

- Region/availability zone, quota, and capacity need verification
- Application performance baseline, backups, and rollback drills need validation
- Provide the target SKU's EA price cap/contract price separately; the source SKU's cap cannot be reused.

Official SKU specifications (internet required)

- Region/availability zone, subscription quota, and live capacity: verify before deployment.

Wave 2 · Limited validation and ongoing optimization

VM-004

`Standard_D4s_v3 · China / chinaeast2 · 1 instances`

Source period: 2026-09-01 to 2026-10-01 (end date exclusive); 720 hours per instance × 1.

Performance evidence: source 4 vCPU / 16 GiB; CPU P95 25%, memory P99 40%, outbound network P95 120 Mbps; observation 30 days, peak coverage Confirmed; type user-facing.

Commercial evidence: MCA / PAYG; RI coverage Unknown%, expiration Not provided; EA enrollment renewal Not provided. Commitment discounts do not transfer automatically from source to target.

Announcement exclusions · This v3 retirement announcement explicitly excludes this cloud. Other lifecycle or pricing announcements may still apply.

Rule REGION-CLOUD-REVIEW: This cloud's regional pricing policy has not been independently verified; an applicable notice is needed.
Storage rule STORAGE-MISSING: No storage product/meter provided.

Source baseline compute cost	Unadjusted compute cost	Associated storage scenario/effective cost	Price evidence
Unknown / Evidence needed	Unknown / Evidence needed	Unknown / Evidence needed	Not provided; the original title is omitted. Refer to the source material.

Default first candidate / v5

Standard_D4s_v5

- 4 vCPU / 16 GiB； No temporary disk
- Projection constraints: CPU ≥ 2.50 cores, memory ≥ 10.67 GiB; no cross-generation CPU speedup is assumed.
- Remote disks: 8 / 6400 IOPS / 145 MB/s; network 12500 Mbps (limits, not guarantees).
- v5: Extended, a low-disruption transition path; resize may still require downtime/deallocation.

Compute cost: **Unknown / Evidence needed**
Including provided remaining commitment cost: Unknown / Evidence needed
Conditional difference: **Unknown / Evidence needed**

Modernization candidates with no reduction in source CPU/memory capacity.

Local price snapshot; original evidence title omitted.

Blocked / Validation needed

- Region/availability zone, quota, and capacity need verification
- Application performance baseline, backups, and rollback drills need validation
- No reliable hourly price matches the cloud/region/SKU/OS/currency/purchase option/effective date.

Official SKU specifications (internet required)

Alternative path / v6

Alternative path / v7

`Standard_D8s_v7`

- 8 vCPU / 32 GiB； No temporary disk
- Retain at least the source capacity of 8 cores / 32 GiB.
- Remote disks: 26 / 16000 IOPS / 460 MB/s; network 25000 Mbps (limits, not guarantees).
- v7: Current; validate against the Gen2/NVMe/MANA modernization path.

Compute cost: **USD 259.20**
Including provided remaining commitment cost: USD 259.20
Conditional difference: **Unknown / Evidence needed**

Modernization candidates with no reduction in source CPU/memory capacity.

Local price snapshot; original evidence title omitted.

`Blocked / Validation needed`

- Region/availability zone, quota, and capacity need verification
- Application performance baseline, backups, and rollback drills need validation
- Insufficient metrics/peak evidence; downsizing was not performed
- NIC and network metrics are missing

Official SKU specifications (internet required)

- Region/availability zone, subscription quota, and live capacity: verify before deployment.
- No reliable hourly price matches the cloud/region/SKU/OS/currency/purchase option/effective date.
- Performance/peak/compatibility evidence is incomplete: only modernization candidates that preserve source CPU/memory capacity are screened; no definitive downsizing conclusion is provided.

Implementation and rollback checklist

- Confirm the business owner, criticality, and downtime window. For stateful systems, design synchronization and role switching first.
- Check source/target images, boot generation, NVMe/MANA, temporary disks, networking, disks, and licensing.
- Verify the target region/availability zone, series quota, and actual capacity in the customer's subscription. Do not infer capacity from quota.
- Confirm RI/SP series coverage, expiration/renewal, remaining commitments, and effective contract prices. Estimate costs before reallocating commitments.
- Establish baselines for application performance, data consistency, backups, and monitoring. Validate representative low-risk instances first.
- Define conditions for stopping rollout, switching back, restoring data, and business acceptance, then proceed in controlled waves according to risk.
